

# POOR VS PROFESSIONAL

## STAIRNOSE INSTALLATION

- Stair risers and treads need to adhere to the substructure
- short-cut/no time taken to fit the stairnose
- creates a hazard
- no preparation/consideration
- not a complete finish and definitely not a good look

- professional 45-degree angle cut to create a return
- Quality workmanship creating high-value
- time taken to measure & prepare
- class and elegance
- covers exposed edges
- functional
- proper and complete finish
