

FIELD MEASUREMENTS OF IMPACT SOUND INSULATION OF FLOORS

Date of Test :	Tuesday, 22 September 2020		
Project No. :	4225		
Testing Company :	Koikas Acoustics		
Checked by :	Nick Koikas		
Place of Test:	Residential building in Macquarie Park		
Client	Paxwood Pty Ltd (Clever Choice Design Floors)		
Client Address	-		
	Name	Thickness (mm)	Density (Sf)
Description of Floor System	Classic Laminate 12mm	12	--
	Clever Acoustic 5mm underlay	5	--
	Concrete	200	--
Room	Width :	3.6	m
Floor	Length :	3.6	m
Dimensions	Area :	13	m ²
Sample Dimensions	Width :	1	m
	Length :	1	m
	Area :	1	m ²

	Location	Width	Length	Area	Height	Volume	Room Surfaces

FIIC	N/A	ASTM E1007-14

Sub Base, Floor & Underlay		
L'nT,w	41	AS ISO 717.2 - 2004
Ci	0	AS ISO 717.2 - 2004
Ci(50-2500)	6	AS ISO 717.2 - 2004
Ci(63-2000)	4	AS ISO 717.2 - 2004
AAAC	5 Star	AAAC Guideline
FIIC	68	ASTM E1007-14

Definitions of Noise Metrics

FIIC:

Field Impact Insulation Class is a single-number rating of how well a floor system attenuates impact type sounds, such as footsteps. Calculated from third-octave band normalised impact sound pressure level data and referenced to 10 m² as described in ASTM E989. The higher the single-number rating, the better its impact insulation performance.

L'nT,w:

The Weighted Standardised Impact Sound Pressure Level when measured in situ referenced to a reverberation time (RT60) of 0.5 seconds. Used by the AAC to determine their respective Star Rating.

Cj:

Spectrum adaption term is a low frequency correction factor. Typically for massive floors such as concrete, the values are about zero while for timber joist floors C_i is positive because of the low resonant frequencies. Considers frequency range between 100 -and 2500 Hz.

Ci(50-2500):

Same as above, but for the frequency range 50 -2500 Hz.

Ci(125-2000):

Same as above, but for the frequency range 125 -2000 Hz.

AAAC Star R.	2	3	4	5	6
L'nT,w	65	55	50	45	40
FIIC	45	55	60	65	70
